## Exercise 11: Integration Methods

## Task 1: (from Exam WS 2010/2011)

Below you find the Butcher Tableau of an RK method of $3^{\text {rd }}$ order.

| 0 | 0 | 0 | 0 |
| :---: | :---: | :---: | :---: |
| $1 / 3$ | $1 / 3$ | 0 | 0 |
| $2 / 3$ | 0 | $2 / 3$ | 0 |
| 1 | $1 / 4$ | 0 | $3 / 4$ |

Perform one integration step of this method on the following system!

$$
\mathrm{dx} / \mathrm{dt}=-\mathrm{x}^{2}-2+3 \mathrm{t}
$$

Start at $\mathrm{t}=0$ with $\mathrm{x}_{\mathrm{t}=0}=1$. The step-size h is 1 .

Return the result for $\mathrm{x}_{\mathrm{t}=1}$ as well as for the two sub-steps

Compute with rational numbers.

## Task 2: (from Exam WS 2011/2012)

Below you find the coefficients for the BDF methods of different orders.

|  | $\alpha_{\mathrm{t}+\mathrm{h}}$ | $\alpha_{\mathrm{t}}$ | $\alpha_{\mathrm{t}-\mathrm{h}}$ | $\alpha_{\mathrm{t}-2 \mathrm{~h}}$ | $\alpha_{\mathrm{t}-3 \mathrm{~h}}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| BDF 1 | 1 | -1 |  |  |  |
| BDF 2 | $3 / 2$ | -2 | $1 / 2$ |  |  |
| BDF 3 | $11 / 6$ | -3 | $3 / 2$ | $-1 / 3$ |  |
| BDF 4 | $25 / 12$ | -4 | 3 | $-4 / 3$ | $1 / 4$ |

Perform 3 integration steps of the highest applicable BDF method on the following system!

$$
d x / d t=2 x-t+1
$$

Start at $\mathrm{t}=0$ with $\mathrm{x}_{\mathrm{t}=0}=-1$. The step-size h is 1 .

Return the result for $\mathrm{x}_{\mathrm{t}=1,}, \mathrm{x}_{\mathrm{t}=2,}$, and $\mathrm{x}_{\mathrm{t}=3}$.

Compute with rational numbers.
